SUMMARY

Backend Developer with 4+ years building LMS and EdTech platforms serving 10,000+ users across web and mobile. Delivered real-time communication systems, secure cloud storage pipelines, and mobile subscription flows using PHP, Symfony, Docker, and AWS. MSc in Engineering (Bilkent, TÜBİTAK Scholar) with a published research record.

EXPERIENCE

•Bk Mobil | Backend Developer

Oct 2021 - Present

EdTech and SaaS product studio. Sole or lead backend developer across a team of 5–10.

Ankara

– Mymentora | PHP 8, Symfony, API Platform, Docker, AWS

- * Built the core backend for a K-12 language learning LMS from scratch, scaling to 10,000+ users (9,000 students, 1,000 teachers) with multi-role access control and full content delivery infrastructure.
- * Designed async workflows using Symfony Messenger and Mercure for file processing and notifications, reducing large file upload times from 3–4 minutes to under 1 minute.
- * Secured media delivery by migrating from public S3 access to CloudFront signed URLs with time-based expiry, eliminating direct asset exposure.
- * Integrated Apple and Google in-app purchase APIs end-to-end, enabling subscription monetization across both iOS and Android.
- * Delivered support for Articulate, Flipbook, and H5P content formats via AWS EC2, S3, and CloudFront, ensuring consistent playback across a diverse content library.

– BAU MyMentora | PHP 8.2, Symfony 7, MySQL, Docker, Oracle Cloud, Mercure

- * Architected backend for a university LMS serving 2,400+ users (2,000 students, 400 teachers), supporting course delivery, assignment workflows, and real-time student-teacher communication.
- * Implemented real-time student-teacher messaging and notifications using Mercure, enabling live classroom interaction without page refreshes.
- * Secured media delivery on Oracle Cloud Object Storage by proxying all access through Nginx, removing direct endpoint exposure entirely.
- * Established a 100+ test suite across unit, integration, functional, and smoke layers — enabling confident, low-risk deployments on a live academic platform.

– TercihBot | PHP 8.2, Symfony 7, Docker, AWS

- * Built the backend for a student placement platform used by 1,100+ users to generate ranked school preference lists from national LGS exam data.
- * Integrated Google OAuth, email, and SMS notification flows, reducing onboarding friction and re-engaging users during peak exam periods.
- * Optimized read performance for seasonal traffic spikes by introducing database indexing and denormalizing school data into a summary table, significantly reducing query load during the LGS exam period.

•Bahçeşehir College | Instructor

Dec 2021 - Jan 2022

Arduino and Sensors

Istanbul

- Delivered hands-on Arduino and sensor integration workshops to high school students.

•Bilkent University | Teaching Assistant

Sep 2018 - Sep 2021

Electrical Engineering

Ankara

- Supported 100+ undergraduate students across the EE core curriculum while completing MSc research under TÜBİTAK scholarship, culminating in a peer-reviewed publication.

EDUCATION

•M.Sc. in Electrical and Electronic Engineering

Sep 2018 - Sep 2021

Bilkent University

Ankara, Turkey

- TÜBİTAK Scholar · Exceptional Teaching Assistance Award · Published: *Transactions of the Institute of Measurement and Control*, 2023

•B.Sc. in Electrical Engineering

Sep 2013 - Feb 2019

Semnan University

Semnan, Iran

PERSONAL PROJECTS

•Yado Invest | Founder & Backend Engineer

PHP 8, Symfony 7, PostgreSQL, Docker, Firebase, Cloudflare, Hetzner

- Architected and built the backend platform for a production fintech application available on both the Apple App Store and Google Play.
- Designed portfolio tracking and analytics services processing financial data across equities, funds, foreign exchange, precious metals, and cryptocurrency markets.
- Implemented secure subscription infrastructure including Apple App Store Server API, Google Play purchase verification, entitlement management, and automated renewal handling.
- Built operational tooling including monitoring, alerting, automated backups, CI/CD pipelines, infrastructure security controls, and disaster recovery procedures.
- Improved platform reliability through rate limiting, authentication hardening, database indexing strategies, asynchronous processing, and production observability.

SKILLS

Languages: PHP, Python, JavaScript, SQL

Frameworks & APIs: Symfony, API Platform, Django, REST APIs, OAuth2, JWT

Databases & Messaging: MySQL, PostgreSQL, Redis, RabbitMQ, Firebase

Cloud & DevOps: AWS (EC2, S3, CloudFront), Oracle Cloud, Docker, Nginx, CI/CD

Testing & Tooling: PHPUnit, Postman, Git, Jira

Spoken Languages: Persian (Native), English (Advanced), Turkish (Intermediate)
